Detached Garage Prototype Drawings

This prototype was developed to create a framework for the minimum submission necessary for plan review, permitting and construction. Other submission formats are acceptable, but should include the same level of information. If these drawings are submitted for plan review, it is important to fill in ALL requested information and include ONLY applicable pages.

The following sheets contain prototype drawings for a freeestanding wood framed 1 or 2 car garage less than 600 sf in total area. Drawings are provided for garage on either the right or left side of the house. Options are also included for either field framed or manufactured roof truss systems.

While many prescribed code requirements are included throughout these drawings, other information must be filled in by the applicant. For instance, roof rafter sizes must be listed by the applicant as the minimum required member is dependent on the span of the roof.

This prototype was developed based on the zoning code of Lakewood Ohio and the January 2016 edition of the 2013 Residential Code of Ohio. Updates and/or specific circumstances may affect requirements indicated.

The Residential Code of Ohio can be referenced online at http://codes.iccsafe.org/Ohio.html
The Lakewood Zoning Code is online at http://www.conwaygreene.com/lakewood.htm
Detached Garage Prototype Instructions

Select either Right- or Left-handed option. Include the property address and page number on each page. Fill in ALL requested information and submit ONLY applicable pages.

Site Plan Page
- Highlight the north arrow to indicate geographic north in relation to the property.
- Fill in lot size, rear yard dimensions, garage dimensions, setbacks, and if applicable driveway and drain.
- Lot dimensions may be field measured or determined based on parcel information from the county auditor. Rear yard depth is measured from the back of the house or an attached deck if present.
- In Lakewood, the following restrictions apply:
  1. Garages are limited to 480 SF or 25% of the rear yard, whichever is greater.
  2. Minimum setbacks in R1H, R1M, R2 zoning districts are 18 inches, 36 inches in R1L for side and rear yards.

Floor Plan Page
- Fill in dimensions for overall width and depth.
- Fill in dimensions for vehicle and man door. Note, at least one side-hinged door 2'-6" x 6'-8" is required.
- Indicate locations of electrical devices if garage is so equipped.
- Note electrical requirements: Exterior light at the man door, GFCI receptacles at all locations. (1) receptacle per vehicle parking bay, underground conductors shall be buried per current NEC requirements.

Wall Section Page
- Select either Framed or Truss roof option.
- Note, if trusses are being used, engineer stamped truss drawings must be submitted.
- Fill framing member size and spacing information.
- Fill in siding and wall sheathing information.
- Fill in overhang dimension. Note that roof overhangs are limited by proximity to a property line. Overhangs may be no closer than 6 inches to a property line and must be fire rated if within 12 inches to a property line.

PFG Portal Framing Page
- Include if neither wing wall adjacent to the vehicle (overhead) door is 48 inches or wider.
